Touring the American empire of bases with the Marines

Richard Tanter and US Marine Corps

Introduction by Richard Tanter

In the decade after the end of the Cold War, triumphantist U.S. public intellectuals, liberal and conservative alike, were trying on the mantle of ‘empire’ for size. For many at the time, while ‘US imperialism’ denoted kneejerk leftism, ‘the American empire’ might just be an appropriate acknowledgement of achievement on a global scale, an accolade about reality rather than a matter of opprobrium.

As the world knows, that hubris led to three catastrophic wars of choice and the destruction of Afghanistan and Iraq and the deaths of hundreds of thousands or more. It also led to the American historian and political scientist, Chalmers Johnson, long-time Cold Warrior and doyen of US East Asian specialists, to astonish his more complaisant professional colleagues by publishing four extraordinary books between 2001 and his death in 2010 probing the reality of American empire, together called the Blowback series:

- Dismantling the Empire: America’s Last Best Hope (2010)

Johnson’s political volte face and pathbreaking analysis of a new form of global empire came out of his close involvement with Okinawan resistance to one of the most enduring and oppressive ‘peacetime’ expressions of the American empire of bases. Seven decades after the US military colonization of Okinawa began, US bases still amount to more than one-fourth of the prefecture’s land area with the struggle continuing over construction of a new Marine base at Henoko. Such is the grotesque weight of American military occupation on Okinawan society and the consequent deeply-rooted resistance that it is still not possible for even a lavishly funded Tokyo-backed conservative to be elected governor of Okinawa without railing against the American bases.

In Nemesis, Johnson summed up the argument of the second book:

‘The Sorrows of Empire was written during the American preparations for and launching of the invasions and occupations of Afghanistan and Iraq. I began to study our continuous military buildup since World War II and the 737 military bases we currently maintain in other people’s countries. This empire of bases is the concrete manifestation of our global hegemony, and many of the blowback-inducing wars we have conducted had as their true purpose the sustaining and expanding of this network. We do not think of these overseas
deployments as a form of empire; in fact, most Americans do not give them any thought at all until something truly shocking, such as the treatment of prisoners at Guantanamo Bay, brings them to our attention. But the people living next door to these bases and dealing with the swaggering soldiers who brawl and sometimes rape their women certainly think of them as imperial enclaves, just as the people of ancient Iberia or nineteenth-century India knew that they were victims of foreign colonization.

Excellent researchers following on from Johnson have raised the count of US overseas military bases to well beyond 1,000 and deepened our understanding of technology-dense strategic islands (Ruth Oldenziel) such as Diego Garcia (Vine’s Island of Shame) and the rapidly proliferating ‘lilypads’ of notionally light-footprint ‘temporary’ or ‘rotational force’ bases in Africa and Asia of special forces or drone deployments (Nick Turse).

Counting bases is tricky. The Pentagon’s annual Base Structure Report is essentially a real estate listing of property acreage and dollar value of ‘sites’, and omits small or ‘low cost’ sites. Its listings of non-US sites include a great many in Japan, South Korea, and in Europe, but there are no listings at all for Afghanistan and Iraq.

So, how many US bases are there outside the United States itself? In 2011, Turse took a stab:

‘There are more than 1,000 U.S. military bases dotting the globe. To be specific, the most accurate count is 1,077. Unless it’s 1,088. Or, if you count differently, 1,169. Or even 1,180. Actually, the number might even be higher. Nobody knows for sure.’

In 2018? We just do not know. On the one hand, budget sequestration, technological change, and base rationalisation programs may have cut the number somewhat. On the other hand, new wars in East, Central and West Africa, Yemen and elsewhere and a proliferation of special operations and drone bases have considerably increased the numbers. ‘Rotational forces’ – regular scheduled deployments of US forces in ‘host’ countries for part of the year on what the Pentagon calls ‘permanent rotation’ - also fudges the issue.

Just this month US Vice-President Mike Pence announced that the Lombrum Naval Base on Papua-New Guinea’s Manus Island is to be expanded to become a ‘joint’ PNG-Australian-United States base to counter an increased Chinese regional presence. The Vice-President followed this up with a joint announcement that the US, Japan, Australia and New Zealand would fund the electrification of seventy percent of Papua’s area in a move to counter Chinese aid programs.

Yet, excellent and assiduous as these researchers are, sometimes the best representation of Johnson’s argument about the American empire of bases comes from the words and images published by the United States military itself.

Such a case is a series of media releases from the U.S. Marines a week or so ago, published in dozens of newspapers, websites, and television programs around the world to celebrate the 243rd birthday of the Marines.

One version appeared on Business Insider India: ‘The US Marine Corps turns 243 today — check out these awesome photos of the Devil Dogs in action’, with all words and images supplied by the U.S. Marines. This version of the article showed marines in action around the world today: in Syria, Afghanistan, Jordan, Bulgaria, Finland, Sweden, Thailand, Romania – and of course, in Australia.

In reality, these amount to just a smidgeon of the 150-plus countries in which, as Nick Turse reported, US special forces – Marines, SEALS, rangers, and so on - operated just between 2011 and 2014. The publicity text shows that the Darwin-based Marine Rotational Force - itself a part of the Okinawan-based 31st Marine Expeditionary Unit amphibious assault group - has its European counterpart, seen below on exercise in Sweden and Romania. These countries, with Australia and many others, are the compliant hosts to the American empire of bases.
